WHY NOW

Volatile markets. A clear target: 11% a year.

Equities are down, interest rates have turned up and global risk is being repriced. Ionic Yield Enhancer targets 11% a year from carefully selected short-term corporate bonds, held at a 1–1.5 year duration.

−12.9%
Nifty 50 in 2026 so far (26,130 → 22,753)

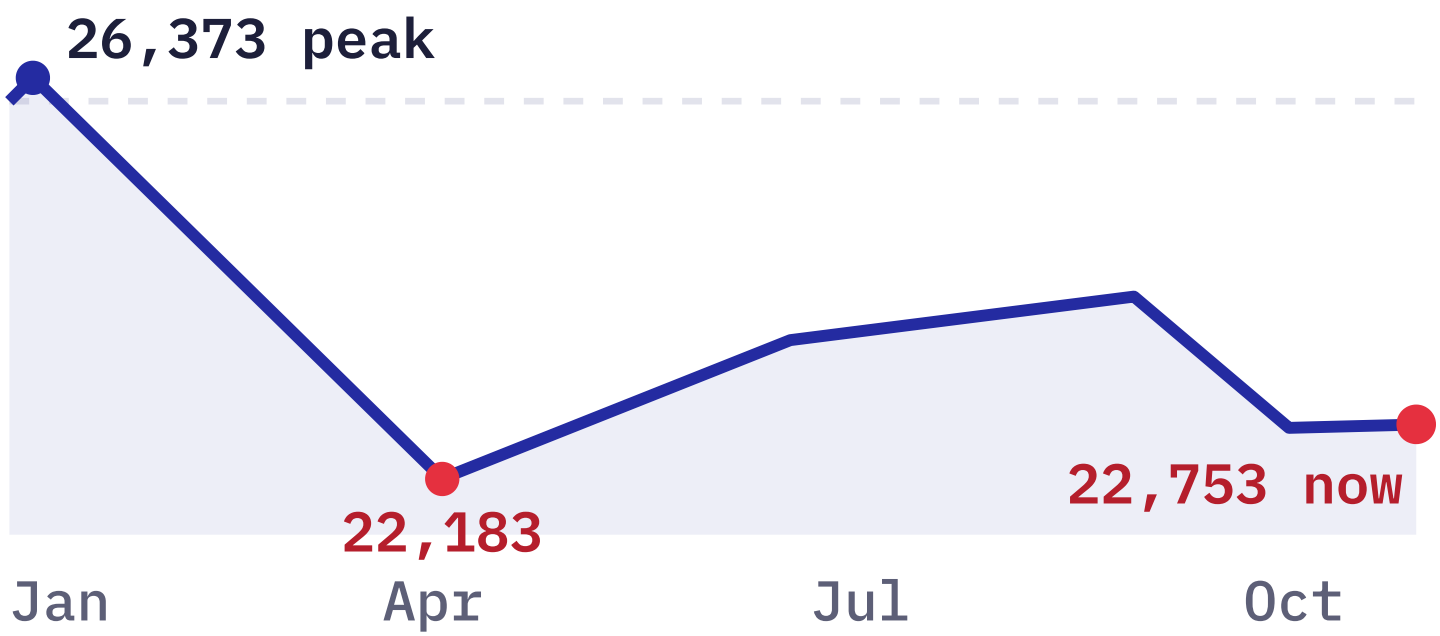

₹3.08 L cr
Record foreign selling of Indian equities, Jan–Sep

7.47%
10-yr G-Sec yield, highest since March 2023

−1.2%
Real return on a 6.25% FD after 30% tax and 5.5% inflation

FORCE 1 · EQUITIES

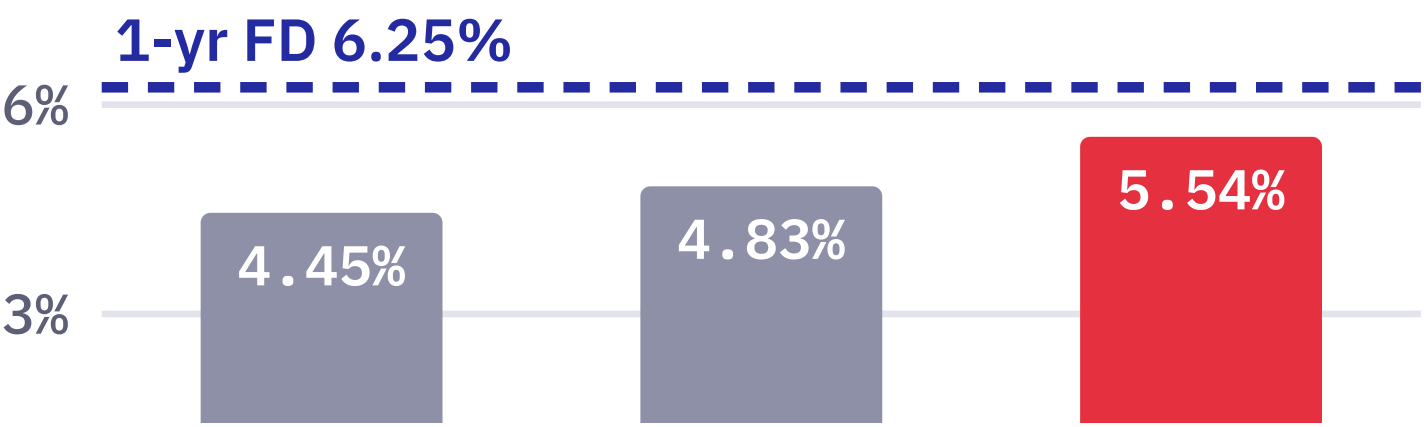

Lower, and more nervous

- Fell 16% from the 5 Jan peak to the 2 Apr low; still 13.7% below peak.
- India VIX more than doubled, from 13.5 to 31 in March.
- FPIs sold ₹3.08 lakh cr in nine months, 1.9× all of 2025.

FORCE 2 · RATES

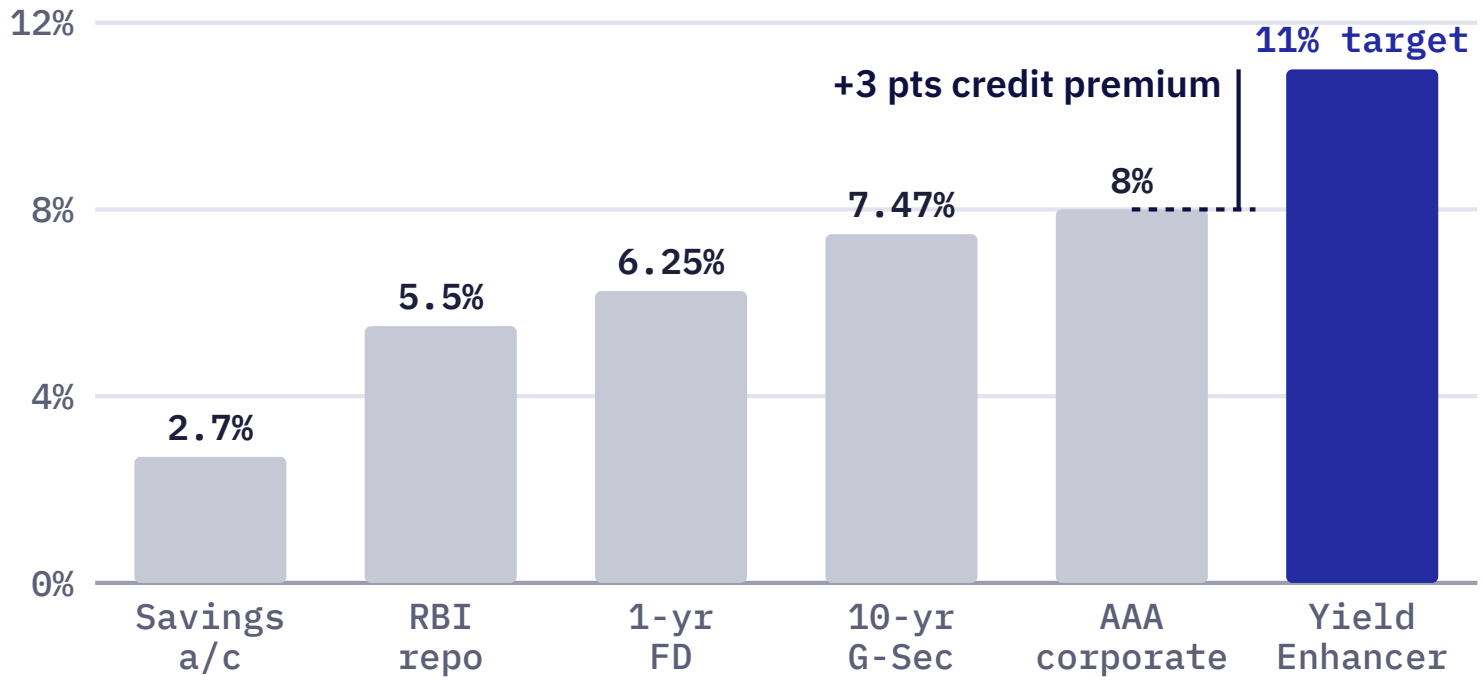

The rate-cut cycle is over

THE STRATEGY

Ionic Yield Enhancer earns from what companies pay, not from what markets feel.

Where 11% sits on the yield ladder

The 3 points above AAA bonds are payment for credit and liquidity risk. Our job is to find issuers where that risk is well understood and well paid.

What you keep, per ₹1 crore

	1-YR FD	YIELD ENHANCER
Pre-tax return	6.25%	**11.00%**
After tax (30% slab + cess)	4.30%	**7.57%**
After tax and inflation (5.54%)	−1.24%	**+2.03%**
Income per year, after tax	₹4.30 L	**₹7.57 L**
Years for money to double, after tax	16.5	**9.5**

Since April 2023, bond and debt-fund income is taxed at slab rates, the same as FD interest. So the 4.75-point pre-tax gap carries through: **₹3.27 lakh** more a year after tax on every ₹1 crore.

If rates rise another 1%: approximate price impact
